Submitted (13-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 13, 2002 this sequence version replaced gi:22855703.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Bach contig described in the feature table bellow represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold') within each contig-scaffold'). Within each contig-scaffold by sized gaps filled with Ns to the estimated and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (20-APR-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 245724)

On Nov 23, 2002 this sequence version replaced gi:23322270. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold', individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: Sstimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Assembly program: Phrap, version 0.990329

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 9799: contig of 9799 bp in length 9800 9899: gap of unknown length 18558 249057: contig of 239058 bp in length 9958 250169: contig of 1112 bp in length Location/Qualifiers

                                                                                                                                                                                                                                                                                                                    Sequencing vector: Plasmid; pUC18
Chemistry: Dye-terminator Big Dye
Assembly program: Phrag version 0.990329.

* NOTE: This is a "working draft' sequence. It currently
* consists of 5 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 33276: contig of 33275 bp in length
* 33275: contig of 33275 bp in length
* 54252 54351: gap of unknown length
* 54352 557331: contig of 11382 bp in length
* 5534 127515: contig of the submit length
* 5534 127515: contig of the submit length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      * NOTE: This is a 'working draft' sequence. It currently tonsists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    contig of 47977 bp in length contig of 13777 bp in length contig of 13777 bp in length gap of 100 bp contig of 52794 bp in length contig of 4482 bp in length gap of 100 bp contig of 4487 bp in length contig of 4857 bp in length gap of 100 bp contig of 6030 bp in length contig of 6030 bp in length

                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                 During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; WP:, WORMPEP; Information on the WORMPEP database can be found at

Newly isolated nucleic acid comprising a control region of a human peroxisome proliferator activated receptor (PPRA) gamma gene - useful for identifying modulators that are useful in treating diseases associated with abnormal levels of human PPAR-gamma gene expression.

Claim 11; Page 88; 102pp; English.

The present invention describes an isolated, purified or enriched nucleic acid comprising a control region of a human peroxisome proliferator

```
cc activated receptor gamma (PPAR-gamma) gene. The nucleic acids are useful for screening for agents capable of modulating the expression of a human PPAR-gamma gene. These agents (modulators) form pharmaceutical compositions that are useful for treating diseases associated with high/low levels of human PPAR-gamma gene expression. The diseases include Obesity, anorexia, cachexia, lipodystrophy, lipomas, liposarcomas, abnormalities associated with anti-human immunodeficiency virus (HIV) treatment, insulin resistance, non-insulin-dependent diabetes mellitus abnormalities associated with anti-human immunodeficiency virus (HIV) tract, inflammatory bowel disease, Crohn's diseases of the gastrointestinal (GI) tract, inflammatory bowel disease, crohn's disease, ulcerative colities and bowel cancer. The nucleic acids are useful for studying the role of the PPAR-gamma gene in various diseases and disorders. The structure of PPAR-gamma enables genetic studies of PPAR- gamma mutations in humans, and evaluation of its role in disorders like insulin resistance, NIDDW, and diseases associated with altered adipose tissue function, like obesity and the production of transgenic animals, which are useful in screening for modulators of the human PPAR-gamma gene syspension. The present sequence useful in designing drugs for treating disorders or diseases associated with the level of PPAR-gamma -3 proximal promoter, exon A2 and intron A2 crosses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      547

The invention comprises amino acid and coding sequences containing genetic polymorphisms associated with an altered risk of developing an autorimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single of polymorphism (SNP) in a nucleic acid of the invention. The DNA and protein sequences of the invention are useful for diagnosing and treating autoimmune disease, such as: rheumatoid arthritis, type 1 dispetes, multiple sclerosis, systemic lupus erythematosus, inflammatory consemia, asthma, vitiligo, glomarionephritis, Grave's disease, pernicious anaemia, asthma, vitiligo, glomarionophritis, Grave's disease, mycarditis, Sjogren's disease, or primary systemic vasculitis. The present nucleic acid represents a human autoimmune disease-related genomic DNA sequence of the invention. NOTE: The present sequence is not shown in the specification, but has been retrieved from the NIPO website.

The present invention describes an isolated, purified or enriched nucleic acid comprising a control region of a human peroxisome proliferator acid comprising a control region of a human peroxisome proliferator activated receptor gamma (PPAR-gamma) gene. The nucleic acids are useful for screening for agents capable of modulating the expression of a human CC compositions that are useful for treating diseases associated with high/low levels of human PPAR-gamma gene expression. The diseases include obseity, anorexia, cachexia, lipodystrophy, lipomas, lipodascomas, cobsity, anorexia, cachexia, lipodystrophy, lipomas, lipodascomas, cobsity, anorexia, cachexia, lipodystrophy, lipomas, lipodascomas, cobsity, anorexia, cachexia, lipodystrophy, lipomas, lipodascomas, lipodascomas, lipodascomas, lipodascomas, lipodascomas, libodascomas, lipodascomas, lipodystrophic syndromes. The nucleic acids are also useful content diseases associated with altered adipose tissue function, like consenting assays. The control regions of the nucleic acids are elso cuseful in screening sassays. The control regions of the nucleic acids are useful cuseful in designing drugs for treating disorders or diseases associated with altered adipose tissue secondar acids cuseful in designing drugs for treating disorders or diseases associated with altered adipose tissue secondar acids cuseful in designing drugs for treating disorders or diseases associated with altered adipose tissue secondar acids cuseful in designing drugs for treating disorders or diseases associated with altered adipose tissue secondar acids cuseful in designing drugs for treating disorders or diseases associated with altered secondar secondar secondar secondar secondar secondar secondar secondar secondar secondar secondar secondar secondared secondar secondar secondar secondar secondar secondar seconda
                                                                                                                                                                                                                                                     Newly isolated nucleic acid comprising a control region of a human peroxisome proliferator activated receptor (PPAR) gamma gene - useful identifying modulators that are useful in treating diseases associated with abnormal levels of human PPAR-gamma gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TAATCCTTTTAAGGTCTAGTTTTTCTTAAGTCTGTGCAGTAATAGAGGTATCGTCATTCA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TGTGACATAAAAGATGGAAAGGGGCTTCATTCATGTTAGTGATGGAAATAGGAAAGTAGG

The invention comprises amino acid and coding sequences containing genetic polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SMP) in a nucleic acid of the invention. The DNA and protein sequences of the invention are useful for disgnosing and treating autoimmune disease, such as rheumatoid arthritis, type I dispetes, multiple sclerosis, systemic lupus erythematosus, inflammatory bowel diseases, psoriasis, thyroiditis, celiac disease, pernicious anaemia, asthma, vitiligo, glomerilonephitis, Grave's disease, pernicious myocarditis, sjogren's disease, or primary systemic vasculitis. The present DNA sequence represents a human autoimmune disease. Tealated genomic-based SNP context sequence of the invention. NOTE: The present sequence is not shown in the specification, but has been retrieved from

The invention comprises amino acid and coding sequences containing genetic polymorphisms associated with an altered risk of developing an autorimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA creating autoimmune disease, acomprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA treating autoimmune disease, servine useful for disquesting and treating autoimmune disease, servine, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory comportations and and and an acid disease, peoritais, thyroiditis, celiac disease, pennicious and ania, asthma, vitiligo, glomerulonephritis, drave's disease, myocarditis, Sjogren's disease, or primary systemic vasculitis. The present present DNA sequence represents a human autoimmune disease-related genomic-based SNP context sequence of the invention. NOTE: The present sequence is not shown in the specification, but has been retrieved from the WIPPO website.

The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SMP) in a nucleic acid of the invention. The DNA and protein sequences of the invention are useful for disquosing and treating autoimmune diseases, such as: rheumatoid arthritis, type I diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory

genetic polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA and protein sequences of the invention are useful for disgnosing and treating autoimmune diseases, such as: rheumatoid arthritis, type I diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory bowel diseases, psoriasis, thyroiditis, caliac disease, pernicious anaemia, asthma, vitiligo, glomerulonephritis, Grave's disease, myocarditis, Sjogren's disease, or primary systemic vasculitis. The present DNA sequence represents a human autoimmune disease-related genomic-based SNP context sequence of the invention. NOTE: The present sequence is not shown in the specification, but has been retrieved from the WIPO website.

Novel nucleic acid useful for diagnosis and therapy of diseases

Homo sapiens

The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases in length of a segment of chemically pretreated DNA (II) of genes associated with development selected from 87 genes listed in the specification such as ACCPN, ADFN, or AFD1 and comprising one of 350 sequences (ABN79984-ABN80333) or their complements. The invention is sequences (ABN79984-ABN80333) or their complements. The invention is development genes, in particular disease associated with companital heart disease, epilepsy, diseases related to histone deacetylation, Currarino syndrome, diseases related to histone deacetylation, Currarino syndrome, diseases related with the chypanent of the brain and limb girdle muscular dystrophy and dwarfism. Colliquers specific to each of the genes are useful for detecting the methylation state of all CpG dinucleotides within the 350 sequences or (II) and their complementary sequences, as primer oligonucleotides for the amplification of the 350 sequences, (II) and/or their complements and as oligomer probes for detecting the cytosine methylation state and or this spatent did not form part of the printed specification but is based on patent did not form part of the printed specification but is based on patent did not form part of the printed specification but is based on 1578 ö 428 489 AATAGGAAAGTAGGTGAAGTGATTTTAATAGATGTTTCTTTTATGAAATAATTTTTAAAA 548 associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes associated with development. antiarteriosclerotic; antianaemic; cytostatic; nootropic; neuroprotective; anti-HIV; anticonvulaant; ophthalmological; antirheumatic; antiarthritic; antidiabetic; antipsoriatic; antiinflammatory; cancer; eye dlaease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease; gene; sequence information supplied to Derwent by the European Patent Office 309 TAGAATGAAGTTATATTTTAAAAAGGATCGTTTTTGCCATGTATAAATTTTTCAAACATTA 369 ACTITCAGGGTTATTAATCCTTTTAAGGTCTAGTTTTTTTTAAGTCTGTGCAGTAATAGA 1519 TTATTTTTGTATAGTATTTTTTTTTTTGGTTAATTTTTATTTTATGTTAAAGTTGTAGT Gaps system disease; cytosine methylation; antiasthmatic; ö Sequence 5771 BP; 1877 A; 37 C; 980 G; 2877 T; 0 U; 0 Other; Length 5771; Score 50; DB 6; Length 577 Pred.                                                                                                                                                                                                                                                                                                                                                                         system associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          350 TATAAATTTTCA--AACATTAACTTTCAGGGTTATTAATCCTTTTAAGGTCTAGTTTTTC 407
                                                                                                                                                                                                                                                             Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine
                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, ancer, acute myeloid leukeemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TTTATGAAATAATTTTTAAAAGATTGTCCAGCCCTGCATGATTTATGATGAATCATTTTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to chemically pre-treated DNA of genes associated with apoptosis. The nucleic acids are used to allocate patients for specific therapy for HIV infection, Bloom syndrome, cardiopathy, aging, neurodegenerative disorders, Herpes since syntus infection, renal ischaemia, amyotrophic lateral sclerosis, solid tumours and cancers. This nuclectide sequence represents a chemically treated apoptosis gene. Even NEQ ID numbers are the complementary DNA strands to the odd SEQ ID numbers. The sequence data for this patent is not represented in the printed specification but is based on information supplied by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Apoptosis, HIV, Bloom syndrome, cardiopathy; neurodegenerative disorder; Herpes simplex virus; renal ischaemia, amyotrophic lateral sclerosis;

analysing diseases associated with the methylation state (CpG) and/or detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The oligomers may also be used as PCR primers. The 84 nucleic acids and their complements is useful for diagnosis and therapy of solid tumours and cancer. The present sequence represents one the 87 DNA sequences or its complement. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antiarteriosclerotic; antianaemic; cytostatic; nootropic; neuroprotective; anti-HIV; anticonvulsant; ophthalmological; antiarthritic; antidiabetic; antipsoriatic; antiantilnilammatory; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimear's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease; gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid retweemia, Alzheimer's disease, Alls, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

```
The present invention relates to chemically modified DNA sequences of signal transduction associated genes. The DNA sequences are chemically modified using a solution of bisulphite, hydrogen sulphite or disclosed are oligomuclectides and/or PNA oligomers for detecting the cytosine methylation state (CpG islands) of these genes, and a method for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DNA can be obtained from cells or cellular components which contain DNA, e.g. cell innes, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid, tissue embedded in paraffin such as tissue from eyes, intestine, kidney, brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent chemically pretreated genomic DNA sequences of different genes associated with signal transduction, or their complementary sequences. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2533 TTTTGTTTTAATTATTTATGTATTTTTTTAGTTTTGATAGCGTTTAGTTTTATTGATTTT 2592

The nucleic acids are used to allocate patients for specific therapy for HIV infection, Bloom syndrome, cardiopathy, aging, neurodegenerative disorders, Herpes simplex virus infection, renal ischaemia, amyotrophic lateral sclerosis, solid tumours and cancers. This nucleotide sequence represents a chemically treated apoptosis gene. Even SEQ ID numbers are the complementary DNA strands to the odd SEQ ID numbers. The sequence data for this patent is not represented in the printed specification but is based on information supplied by the
                                                                                                                                                                                                                                                                                            GTTTCTTTTATGAATAATTTTTAAAAGATTGTCCAGCCCTGCATGATTTATGATGAATC 581

The DNA sequences are chemically modified using a solution of bisulphite, hydrogen sulphite or disulphite. Also disclosed are oligonucleotides and/or PNA oligomers for detecting the cytosine methylation state (CpG islands) of these genes, and a method for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DNA can be obtained from cells or cellular components which contain DNA, e.g. cellines, blood, sputum, stool, urine, cerebral-spinal fluid, tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Oligonucleotide for diagnosis and therapy of diseases associated with signal transduction e.g. cancer, comprises chemically modified genomic sequences of genes associated with signal transduction.

brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent chemically pretreated genomic DNA sequences of different genes associated with signal transduction, or their complementary sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
